EDUCATION

Adama Science and Technology University (ASTU)

Adama, Ethiopia

Bachelor of Science in Software Engineering • Expected Graduation: 2028

- Active Member of CSEC ASTU (Computer Science & Engineering Club).

TECHNICAL SKILLS

Programming Languages:	Python, C++, JavaScript
Web Dev & Databases:	React, Node.js, Express, MongoDB, HTML5, CSS3
Design & Tools:	UI/UX Design (Figma), Git, GitHub, VS Code
AI Tools & Frameworks:	GitHub Copilot, ChatGPT, Gemini, Google AI Studio, Retrieval-Augmented Generation (RAG)
Core Competencies:	Full-Stack Web Development, Backend Architecture, Algorithmic Problem Solving, Prompt Engineering

SOFTWARE DEVELOPMENT PROJECTS

Retrieval-Augmented Generation (RAG) Chatbot

AI Developer

- Developed an intelligent engineering conversational bot utilizing Retrieval-Augmented Generation (RAG) architectural patterns to fetch and synthesize multi-source data points accurately.
- Leveraged Google AI Studio, Gemini, and ChatGPT LLM endpoints to structure system behaviors and evaluate programmatic execution output accuracy.
- Integrated GitHub Copilot daily within local development pipelines to optimize iterative structural debugging and maintain standard documentation practices.

Bootcamp Management System (BMS)

Backend Developer

- Architected core application servers and operational multi-tier relational data schemas leveraging Node.js, Express, and MongoDB environments.
- Authored modular enterprise application protocols following specific Software Requirements Specifications (SRS) frameworks.

Job Sphere (Job Board Platform)

Frontend Developer & Designer

- Produced complex web design architectures and standard high-fidelity layout components using Figma.
- Translated detailed interface specs into production-ready web client frameworks utilizing modular React components and responsive CSS layouts.

Graduation Task Tracker & To-Do Application

Full-Stack Developer

- Built an end-to-end task optimization engine to regulate critical milestone tracking, progress updates, and systematic task categorization workflows.
- Maintained custom component structures and clean storage interfaces to enforce robust client state persistence.

Interactive Commemorative & Birthday Systems

Frontend Developer

- Engineered fully responsive personalized tracking platforms utilizing structured HTML5 markup, dynamic modern CSS transitions, and core asynchronous JavaScript engine workflows.
- Implemented performant element transitions and custom action handler trees to preserve high UI interaction metrics.

COMPETITIVE PROGRAMMING & EXPERIENCE

CSEC ASTU Development Division

June 2026 – Present

- Participating in an engineering boot camp cycle targeting distributed application architecture development and systematic open-source contributions.

Algorithmic Computation & Logic Optimization

Independent

- Maintain an active practice profile solving runtime-critical computing challenges on production evaluation grids including Codeforces and LeetCode using optimized Python and C++ logic execution structures.
